System Overview & Access

LogSmart is a modern, cloud-native platform designed to eliminate the need for paper-based logging. It serves as a single central source for a company's daily operational logging and employee time tracking.

LogSmart is delivered as a Progressive Web App (PWA). This is a single, unified application that runs natively within any modern web browser and is fully installable on your device (iOS, Android, Windows, and Mac). This architecture bypasses app store restrictions and ensures every user is always on the latest version.

Installing LogSmart

Desktop Installation (Recommended for Admins/Managers)

The desktop-optimised interface serves as the command centre for user management, template creation, and reporting.

1. Open your web browser (such as Chrome or Edge) and navigate to logsmart.app.
2. Click the Install LogSmart icon located in your browser's address bar, or found in the pop up in the bottom right.
3. The app will install to your computer, allowing you to launch it directly from your desktop or taskbar.

Mobile Installation (Recommended for Field Users)

The mobile-optimised interface is the primary tool for non-desk users to clock in and submit daily logs.

1. Open your mobile browser (Safari on iOS, Chrome on Android) and navigate to logsmart.app.
2. Open your browser's options menu (tap the "Share" icon on iOS or the three vertical dots on Android).
3. Select Add to Home Screen.
4. The LogSmart app icon will appear on your home screen, functioning exactly like a native mobile application.

System Requirements & Compatibility

LogSmart is a modern, cloud-native platform. Because it is delivered as a Progressive Web App (PWA), there are no complex hardware requirements or app store downloads needed.

- **Desktop Operating Systems:** Compatible with Windows, Mac and Linux.
- **Desktop Browsers:** We recommend using the latest versions of Google Chrome or Microsoft Edge for the best experience.
- **Mobile Operating Systems:** Compatible with iOS and Android.
- **Mobile Browsers:** We recommend using Safari on iOS devices or Google Chrome on Android devices.

Dashboard Overview

The **Dashboard** is your central command hub upon logging in. It is divided into three primary sections for immediate access to your daily tasks:

- **Today's Logs (Left Panel):** Displays a prioritised list of all log templates currently assigned to you for the day. Each item displays its current status (e.g., "Not yet started"). Simply click the green **Fill Out** button next to any log to begin data entry.
- **Quick Actions (Center Panel):** Provides fast navigation shortcuts to administrative tasks, including **Create New Template** and **View Reports**.
- **Clock In / Out (Right Panel):** Your personal time-tracking widget. It displays your current status (e.g., "Currently Clocked Out"), a large green **Clock In** button, and a **Recent Activity** feed showing your exact clock-in/out timestamps and shift durations.

These widgets can be rearranged if the user wishes by clicking and dragging them into the desired order.

Administrator Guide: Workspace Setup

Registering Your Company

1. Launch LogSmart and navigate to the registration screen.
2. Enter your secure email and create a password to establish your user authentication.
3. Follow the on-screen prompts to register your company profile.

Authentication & User Roles

LogSmart utilises secure user authentication, requiring users to create an account and sign in with a secure username/email and password.

The system operates on Role-Based Access Control (RBAC) to ensure data security. There are two primary permission levels:

Admin/Manager: Granted access to the command centre via the desktop-optimised interface. Admins can register their company, create templates, view all logs, and review team logs.

Standard User: Granted access to the mobile-optimized interface designed for non-desk employees. Users can only create and view their own logs, and utilize the clock in/out functionality.

Managing Users & Access Control

The **Users** tab allows Administrators to control who has access to the workspace, assign branches, and manage permission levels (Role-Based Access Control).

Inviting New Users

1. Navigate to the **Users** tab from the top navigation bar.
2. Click the circular **+ Add New** button.
3. In the **Register New User** pop-up, enter the **New user's email**.
4. Select their **Role** from the dropdown menu (choose **Staff** for standard field users, or **Internal Admin** for management).
5. Assign them to a specific **Branch** (or select "Company Wide / Headquarters").
6. Click **Send Invite**.
7. *Note: Sent invitations that have not yet been accepted will appear in a yellow **Pending Invitation** banner at the top of the user list, complete with an expiration date.*

Promoting Users & Editing Profiles

If you need to promote a standard "Staff" member to a "Company Admin", or change their details:

1. Click on the user's name in the user list.
2. This opens their **Profile** panel on the right side of the screen.
3. Under the **Role** dropdown menu, change their status using the dropdown menu.
4. You can also use this panel to edit their Name, assign them to a different Branch, or click **Reset** under the password field to trigger a password reset.
5. Click **Save** at the bottom of the profile panel to apply changes.
6. To completely delete a user from the workspace, click the **Remove** button located directly on their user card in the main list.

Administrator Guide: Creating Digital Logs

Administrators can create customised digital log templates (such as incident reports or daily checklists) using two different methods.

Creating Templates via the Canvas (Drag & Drop)

1. Click the green **+ Create New** button on the left sidebar.
2. In the main **Canvas** area, enter a **Template Name**.
3. Use the visibility dropdown to assign it to a specific branch or leave it as **Company Wide Visibility**.
4. Look at the **Components** menu on the far right. Click and drag any of the following fields directly onto the dark Canvas area:
   - **Text Input:** For short answers or names.
   - **Checkbox:** For task completions or "Yes/No" verifications.
   - **Temperature Input:** Specifically formatted for numerical temperature recordings (e.g., fridges, cooking temps).
   - **Dropdown:** For multiple-choice selections.
   - **Text Label:** To add instructions or subheadings to your form.
5. Use the **Snap On / Snap Off** toggle at the top of the canvas to help precisely align your components.
6. Click the blue **Save Template** button when finished.

Creating Templates via the AI Generator

If you want to rapidly generate a complex log without manually placing components:

1. Look to the **AI Generator** section in the bottom left corner of the Templates Dashboard.
2. Click inside the **Template Prompt** text box.
3. Type a plain-English description of what you need *(e.g., "Create a daily vehicle inspection log including a text input for the license plate and checkboxes for tire pressure and oil levels")*.
4. Click the purple **+ Generate** button. LogSmart will automatically build the form on your Canvas, which you can then manually edit, refine, and save.

Field User Guide: Daily Operations

This interface is designed to be highly user-friendly so employees can easily fill out logs and manage their shifts.

Clocking In and Out (Time & Attendance)

1. Launch the LogSmart application on your mobile device.
2. On the dashboard, locate the simple Time & Attendance tool.
3. Tap **Clock In** to record the start of your shift.
4. When your shift is over, open the app and tap **Clock Out**.

Submitting Daily Logs

1. Navigate to your **My Logs** dashboard.
2. Select the specific template or checklist you need to fill out.
3. Enter the required information into the interface and submit the daily log.
4. Your submission will be securely sent to centralised cloud storage.

Logs Dashboard

The **Logs** tab in the top navigation is where you view submitted data. Standard users will only see their own completed logs, while Internal Admins can view all logs submitted across the company. You can click into any submitted log to view the exact data entered by the employee, the time of submission, and the user attached to the record.

Time & Attendance Tracking

The **Attendance** tab provides a comprehensive overview of all employee shifts, replacing traditional timesheets.

1. **Filtering Data:** Use the **From** and **To** calendar inputs at the top left to select a specific date range. Click **Apply**.
2. **Searching:** Use the **Search** bar on the right to instantly filter the table by a specific employee's name or email address.
3. **Viewing the Roster:** The main table displays the Employee Name, Email, precise Clock In / Clock Out times, total shift Duration, and current Status (e.g., "Clocked Out").
4. **Exporting Timesheets:** Click the **Export PDF** button in the top right corner to instantly generate a clean, printable document of the currently filtered attendance records for payroll or HR purposes.

Audits & Reporting

When an inspection occurs or you need to remake/pull old compliance reports, navigate to the **Reports** tab. The **Generate Report** engine is highly customisable, allowing you to build the exact document an auditor requires.

Configuring Your Report Parameters

1. **Date Range:** Use the **Date From** and **Date To** calendar selectors on the left sidebar to isolate the specific timeframe needed (e.g., all of Q3).
2. **Log Types:** Check or uncheck the boxes to include or exclude specific data types: **Text Logs**, **Checkbox Logs**, **Temperature Logs**, and **Dropdown Logs**. (Leave **All** checked for a complete audit).
3. **Arrange By:** Choose how the final document will be organized.
   - Click **Arrange By Date** to see a chronological timeline of logs.
   - Click **Arrange By Log Type** to group all identical checklists together.
4. **Include Temperature Graphs:** If you are auditing temperature records (like commercial freezers), check this box. LogSmart will automatically generate visual line graphs plotting temperature trends over time *(Note: Requires a minimum of 2 temperature entries)*.

Generating and Exporting

1. Once your parameters are set, click the **Generate** button.
2. A preview will appear in the main window confirming the report.
3. At the top right of the preview window, select your desired export format:
   - **Download PDF:** Best for secure sharing and direct printing for health inspectors.
   - **Download DOCX:** Best if you need to manually add notes in Microsoft Word before sending.
   - **Download RTF:** Best for universally compatible raw text formatting.

Frequently Asked Questions (FAQ) & Troubleshooting

Q: Do my employees need to download LogSmart from the Apple App Store or Google Play Store?

A: No. LogSmart bypasses app store restrictions entirely. Users simply navigate to logsmart.app on their mobile browser and select "Add to Home Screen" to install it natively.

Q: How do I change an employee's permission level?

A: Click on the user's name in the user list to open their Profile panel. From there, you can use the Role dropdown menu to change their status between Staff and Internal Admin.

Q: How do I reset a user's password?

A: Administrators can trigger a password reset by opening the user's Profile panel and clicking **Reset** under the password field.

Q: The AI Template Generator didn't give me the exact form I wanted. What should I do?

A: Ensure you are using a clear, plain-English description in your prompt, mentioning specific inputs like checkboxes or text fields. If the generated form isn't perfect, you can manually edit and refine the components on the Canvas before saving.

Data Privacy & Compliance

LogSmart is built with enterprise-grade security to protect your company's operational records and employee data.

- **Access Control:** The system enforces strict Role-Based Access Control (RBAC). Standard users can only view their own logs, preventing unauthorised access to company-wide records.
- **Data Storage:** All submitted daily logs and compliance records are securely sent to centralised cloud storage, ensuring data integrity for future audits.
- **Authentication:** Access to the platform requires secure user authentication via a registered email and password combination.

Contact & Support

If you experience technical difficulties or need guidance beyond the scope of this manual, the LogSmart team is here to help.

- **Email Support:** Reach out to us at team@logsmart.app.
- **Feedback:** We are constantly iterating on the LogSmart platform. If you have feature requests or usability feedback, please let your Admin know so they can pass it along to our team.
